Table Of Contents

1. General Info And Instalation

I. *About*

MePro is Creative Personal & Portfolio template, With useful features make MePro the perfect templates for your personal page.

II. *Getting template online*

1. It's important to understand that you must either have your own server space or use someone elses. The server space can be purchased at many different places around the internet. You need somewhere to put the files that you purchased so others can find them online.

2. The template folder will have several files with the extension labeled .html. This is where all your content will. It's very important to keep the css and js-plugin folders with the HTML or the HTML will not look how the design is meant to look. Along with the HTML files, you will also have four additional folders inside assets folder to upload: stylesheets, javascipts, fonts, and images.

3. Start your FTP client (I persoanlly use Filezila which is free) and login. Login to your server. You will need your server name (often times this will be your domain name), username, and password that you setup with the hosting company.

2. Add Your Logo and Favicon

I. *Add your logo*

To change the logo you can simply follow this step

1. Resize Your logo to 100x40 (recommended) and convert it to PNG file type.
2. Go to **assets/images/** folder
3. Rename your logo to logo.png , Replace the current logo.png

II. *Add your favicon*

To change the favicon You just simply replace the favicon.png on assets/images with your favicon, recommended size is 32x32

3. Setup Google Map

I. Index Page

To change the map location on index page you can follow this step

1. Open the ***custom-map.js*** file

2. Go to **line 6** and replace the latitude and longitude value, with your generated latitude and longitude address . Read more about latitude and longitude at https://support.google.com/maps/answer/18539

   ```
   var myLatlng = new google.maps.LatLng(40.6700, -73.9400);
   ```

   NOTE: latitude and longitude value in the example is 40.6700 and -73.9400

4. Custom Color Schemes

To add your custom color scheme to alll your pages you must to do this

I. Via CSS

To change the featured song on index page's main banner

1. Go to line 44 on every **html** files

2. Replace the current color schemes to the color schemes which you can choose on `assets/stylesheets/css/colors/` folder

3. You can just change the color name to your chosen color scheme , see the bolded blue.css text below
   ```
   <link href="assets/stylesheets/css/colors/blue.css" rel="stylesheet">
   ```

II. Via LESS

To do this you must have a less compiler on your computer. If you had this, just follow this step:

1. Go to line 5 on **assets/stylesheets/less/color-sheme.less** files
2. Change the value of @maincolor with your own custom color
   `@maincolor: #f9bf3b;`

5. Add Custom media on Index & journal masonry page

I. Adding Custom Images

1. To do this you must have images with the resolution size is same with the size of the placeholder images (size of the placeholder images are displayed on each placeholder images).
2. Locate **assets/images/**
3. Paste your images there.
4. Replace the news1.jpg, news2.jpg, news3.jpg, news4.jpg with your custom images.

6. Add Custom banner on pages

I. Index Page Main Banner

1. To do this you must have images with the resolution size is same with the size of the placeholder images (size of the placeholder images are displayed on each placeholder images).
2. Locate **assets/images/**
3. Paste your banner there.
4. Replace the banner1.jpg, with your custom images.

II. *Section Background*

1. To do this you must have images with the resolution size is same with the size of the placeholder images (size of the placeholder images are displayed on each placeholder images).

2. Locate **assets/images/**

3. Paste your banner there.

4. Replace the banner2.jpg, banner3.jpg, banner4.jpg with your custom images.
